Preface	<i>i</i>
Acknowledgements	<i>v</i>

## *Part I. Research Framework*

Chapter 1. Scientific Models	1
What is a scientific model?	1
Scientific model formation	6
Models and analogies	8
Scientific model development	13
Models and theories	
Summary	22
Chapter 2. Modeling in the Classroom	27
Bridging technique	27
Modeling method of instruction (three modeling cycles)	35
Model-based inquiry (four conversations)	42
Summary	47
Chapter 3. An Unsolved Puzzle	53
The long decay model	53
A few definitions	60
A young Galileo in the classroom	61
The ordinary student	65
An object to think with	66
Teaching by analogy	69
A study of student modeling	72
Summary	74

## *Part II. Research on Student Model Formation and Development in Mechanics*

Chapter 4. Case Study I (Anda and Rick)	75
Preparatory lessons	76
F2 modeling task	79
Models in conflict	79
Internal and external coherence tests	83
Sagredo and Simplicio	84
Summary	86
Chapter 5. Case Study II (Juan)	87
Interview transcript	87
Five cardinal models	93
Summary	95

Chapter 6. Case Study III (Chris and Laura)	97
Modeling Aid™	97
Student dialogue	98
Summary	102
Chapter 7. Case Study IV (Kristy and Mia)	105
Another object to think with	105
Preparatory unit	107
Interview transcript	110
Summary	115
Chapter 8. Model-Based Reasoning	117
Student responses to the F2 modeling task	117
Models of student modeling	119
Expanded methodological framework	129
A novel hypothesis	133
A definition of deep learning	135
The mechanical fan cart model gravity	141
Summary	142

*Part III. Research Extensions*

Chapter 9. A Search for Cardinal Models	145
Brief history of mechanics	146
Historical models of the vertical ball toss	160
A cognitive perspective	165
Summary	168
Chapter 10. Student Conceptions of Free Fall	173
Five classic research studies in mechanics	173
Eight knowledge claims	184
Summary	185
Chapter 11. Pathways to Formal Knowledge	189
Phenomenological primitives	189
From p-prims to expert knowledge	191
About ordinary people	195
About scientists	198
Model co-construction	201
Summary	206
Chapter 12. Perspectives	207
How do students learn in a model-centered classroom?	207
What does “deep learning” in science mean?	211
Two approaches to research and teaching	212
Summary	215
